ACCESS CONTROL.

THE HEART OF THE **SECURITY ENTRANCE**

The access control system is the heartbeat of the physical security entrance. The two work hand-in-hand to create the most effective method for mitigating any unauthorised entry. The access control system grants and manages access to certain areas within a building, while the physical security entrance operates to deter, detect or prevent tailgating and piggybacking. Integration between the two is a fine art and a balance must be struck between functionality, space and aesthetics.

OVERVIEW

Access control systems are being used by organisations around the globe to verify identity and control entry into buildings. Access control devices, such as card readers, are often installed alongside swing doors with the intention of mitigating any unauthorised entries. However, once open, a swing door can allow multiple users to go through on a single credential. Pairing a physical security entrance with an access control device effectively addresses the risk of unauthorised entry and provides reliable support for security personnel.

MITIGATE TAILGATING AND PROVIDE METRICS DATA

Security entrances integrated with an access control system mitigate tailgating and piggybacking into facilities. Depending on the security entrance selected, organisations can deter, detect or completely prevent unauthorised entry. Integration between access control and security entrances can also provide the security manager with a wealth of metrics data, including completed passages, rejections and emergency button usage - to give more insight into how the entrances are used.

HOW IT WORKS

The beauty of security entrances is that they can integrate with virtually any access control system. While all security entrances have a designated place for mounting the access control device, alternative integration methods may be necessary due to space restrictions. Access control devices can also work in tandem with biometric devices to create a two-factor or multi-factor authentication scenario for an increased level of security. The integration of an access control device and physical security entrance should not be an afterthought, but rather an integral part of building design from the very beginning

PART OF THE BIGGER PICTURE

Boon Edam products form part of the overall security of a facility, especially when we are talking about high levels of security. We provide the vehicle to integrate a huge array of modern and technologically advanced devices to mitigate risk. We work closely with manufacturers of devices such as card readers, barcode scanners, keypads, video surveillance, etc., and have spent years building good relationships to help our customers get even more out of their Boon Edam entrance solutions. Our role in the complete picture is an important one, as it is via our products that our customers can 'Level Up' their entrance security when their facility demands critical protection.

KEY FEATURES

- ✓ Effective credential management
- ✓ Integrates with security entrances to mitigate tailgating
- ✓ Various integration methods available for high aesthetics
- ✓ Provides metrics data

KEY BENEFITS

- ✓ Works with security entrances to ensure only one authorised person can enter per single credential
- ✓ Provides insight into how entrances are used by personnel and guests

COMPATIBLE PRODUCTS

- ✓ Access gates
- ✓ Tripod turnstiles
- ✓ Full height turnstiles
- ✓ Speed gates
- ✓ High security doors and portals
- ✓ Architectural revolving doors

LEVEL UP OR UPGRADE – WE OFFER FLEXIBLE SOLUTIONS

Buildings are designed to last a lifetime; so are our entry solutions. However, entry requirements change as the way we work and live changes, as rules and regulations are updated and as technologies evolve. Our accessory products are the perfect way to upgrade or update your existing Boon Edam entrance solution. More information on retrofits and upgrades can be found by asking your entry expert consultant.

OUR REACH IS **GLOBAL.**

We have been in business for more than 140 years manufacturing premium aesthetic and security entrance solutions in the Netherlands, United States of America and China. We can confidently say that we cover every corner of the globe with subsidiary companies in major cities across the globe. Furthermore our global export division not only partner with our distributors, but also offer direct sales and service to every territory. This wide net allows us to have a strong global footprint as well as a personal grasp of local markets and their unique entry requirements.
